

# The ideal extractor for laboratory environments.

With its optimal design, the  $\emptyset$  3 inch Movex ME has a very low pressure drop, which provides many valuable benefits:

- Low pressure drop saves energy.
- Air flow noise is reduced.
- Lower pressure drop is achieved without selecting a larger diameter extractor.
- Lower pressure drop allows the ME to be combined with additional extraction systems.

Unique design and stable mounting brackets make the Movex ME your best choice.

Support for designing an efficient facility is available on page 5, and at www.movexinc.com where you will find our design tool and CAD drawings.

The Movex range also includes fans, accessories, automatic controls and filters suitable for local extraction.

LOCAL EXTRACTION Pure advantages

# MOVEX®ME 75

# Always choose a low pressure drop

Lowest possible pressure drop is a quality aspect that always should be considered.

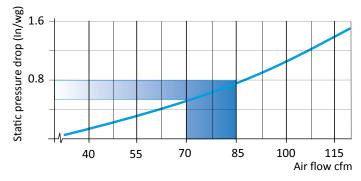

With its uniquely designed joint construction, the Movex ME combines maximum flexibility with low pressure drop. The air passes through the joints without creating unnecessary turbulence, thus producing an energy-saving low pressure drop and a quieter working environment.

# Recommended air flow

The recommended air flow for a  $\emptyset$  3" arm is 70-85 cfm. See table and diagram.

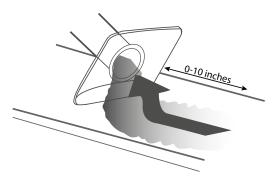

Activity	Air flow
Laboratories	70-85 cfm
Schools – science classrooms	70-85 cfm

Static pressure drop is measured in accordance with ISO standard 5167-1.

# **Optimal capture**

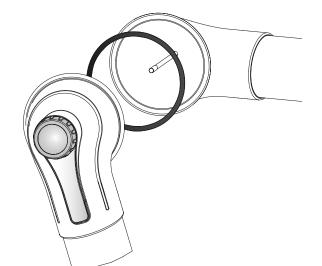

For optimum benefit from the local extractor, it is important to use the flexibility of the extractor to get as close to the contaminant as possible. A good rule of thumb would be a distance of 2–3 times the diameter of the extractor tube. At the recommended air flow, the extractor will provide high efficiency even if disturbances are generated in the surroundings.

# Unique benefits

The Movex ME joints have a patented friction design that, combined with the large joint diameter and single grip handle, provide a secure, position-stable arm with smooth adjustments. All without the need to apply excessive force or use tools on the adjusting knob.

Joints with reinforced ends and ball bearings moderate the friction and allow the arm to be moved up and down while maintaining stability and function.

### One arm. All options.

The Movex ME has a complete range of accessories to suit every situation, enabling you to create the optimal extractor for the evacuation of hazardous airborne gases and particulates.

#### Standard version

Suitable for evacuating most types of airborne contaminants, e.g. in laboratories, schools, hospitals, the pharmaceutical industry, nail salons and light industrial applications.

Used primarily for evacuating very corrosive contaminants in high concentrations, e.g. in certain laboratories and in the pharmaceutical and chemical industries.

ESD version

Suitable for evacuating airborne contaminants in environments where there is a need to avoid the risk of spark formation and in areas where products need to be ESD-certified, e.g. the electronics industry.

**ATEX version** 

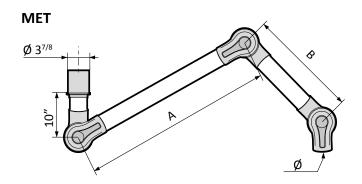

Suitable for evacuating airborne contaminants where there is a requirement for an ATEX-classified environment, e.g. in laboratories, the chemical and petrochemical industries, gas distribution, and the paint and pharmaceutical industries.

The MET with internal mechanical spring for ceiling and wall mounting

Add MTI bracket for ceiling mounting. Add MVK bracket for wall mounting.

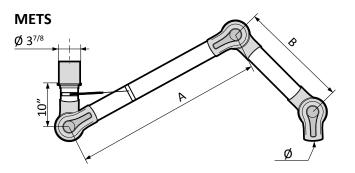

# The METS with external gas spring

For arms of length 60 inches and 80 inches, Movex recommends the gas spring model to provide better stability.

The gas spring can also be used as a height stop, e.g. on low ceilings and where there are low electrical fittings.

### Material description

#### Friction joints

Ball bearing-equipped adjustable friction joints in polypropylene (PP), with guide ring in low friction-treated rubber. Support springs and other component parts in zinc-plated steel or stainless steel.

#### Tubes

Made from thin-walled anodized aluminum; alternate from polypropylene. Air-tight damper supplied as standard.

#### **ME Standard**

The standard ME version has polypropylene joints and anodized aluminum tubes.

The standard ME version is suitable for evacuating most types of airborne contaminants, e.g. in laboratories, schools, hospitals, the pharmaceutical industry, nail salons and light industrial applications.

#### ME PP

Polypropylene joints and tube version. All metallic parts that are in contact with the air flow are made of stainless steel. The PP version of the ME is used primarily for evacuating very corrosive contaminants in high concentrations, e.g. in certain laboratories and in the pharmaceutical and chemical industries. When using a PP extractor fitted to a ceiling, we recommend that you order the MTI ceiling bracket with an internal epoxy coating.

Conductive polypropylene joints and tubes. All metallic parts that are in contact with the air flow are made of stainless steel. Static electricity is diverted to a separate earth connection. All steel supporting parts are lined in a conductive powder coating. The product meets the requirements of category 2 of the ATEX directive (94/9/EC) for gases and dust.

The ATEX version of the ME is suitable for evacuating airborne contaminants where there is a requirement for ATEX-classified products, e.g. laboratories, the chemical and petrochemical industries, gas distribution, and the paint and pharmaceutical industries.

Joints and tubes are made from conductive propylene, making the entire arm electrically conductive and diverting any static electricity to a separate earth connection.

The ESD version of the ME is suitable for the evacuation of airborne contaminants in environments where there is a need to avoid the risk of spark formation caused by static electricity and in areas where products need to be ESD-certified for use, e.g. the electronics industry. The ME ESD has been approved in accordance with EN 61340-5-1.

### Delivery

Ceiling/Supplied assembled, excluding hood. TheWallceiling or wall brackets should be ordered separately.MET

Table-Supplied assembled, with attachment plate for tableMEBfitting, excluding hood.The MBF flexible table bracket should<br/>be ordered separately.
